Integration, configuration and software testing of the common water resources management system created within the project "WRESTLE"

The integration, configuration and software testing of the Joint water resources management system created within the project "WRESTLE", was successfully completed.

The Monitoring System aims at the optimal management of water demand, taking into account the storage, management, visualization and analysis of consumption, in order to provide forecasts for its characteristics, the detection of emergency problems and to inform consumers and the water supply companies.
